PROFILE

I build Java and Spring Boot backends: REST APIs with clear contracts, a protected domain and tests you can sleep on. I hold a Higher National Diploma in Cross-Platform Application Development (Cesur) and worked as an application developer at CodeArts Solutions with C#, Unity and .NET. Today my focus is the backend: Java, Spring Boot, PostgreSQL and clean architecture. Available now.

FEATURED PROJECTS

Cosplay Journal · Backend · Java 21

github.com/AsKrueger/Cosplay-Journal

A Java 21 and Spring Boot 3 backend with hexagonal architecture that imports real cosplay events, manages projects (cosplans) and coordinates solo, duo and group entries.

- Hexagonal architecture (ports & adapters) with the domain decoupled from infrastructure.
- Aggregates with explicit consistency boundaries and business invariants.

3D Cost Manager · Full stack · Java + Kotlin

github.com/AsKrueger/Calculadora3D

A Spring Boot backend with a cost calculation engine and a native Android client. From materials, machines, labour, margins and the real ESIOS electricity rate, it produces immutable quotes.

- Pure calculation engine (CostCalculator) decoupled from the ORM, with deterministic BigDecimal and HALF_UP rounding.
- Tactical DDD: Project and Quote aggregates, read-only archived projects and immutable financial snapshots.

ExplorerSaga Extremadura · Android + Backend

github.com/AsKrueger/ExplorerSaga-Extremadura

A native Android app in Kotlin and Jetpack Compose to discover Mérida's monuments, restaurants and shops through lists and an OpenStreetMap map, backed by a Spring Boot service that imports places from the Overpass API.

- Android client with MVVM, Navigation Compose and Material Design 3.
- OpenStreetMap map (osmdroid) with category markers and an info BottomSheet.

EXPERIENCE

Application Developer · CodeArts Solutions (Internship · Remote)

Sep 2025 – Jan 2026

- Built cross-platform applications with C#, Unity and .NET.
- Took part in the full cycle: analysis, implementation, testing and delivery.
- Worked in agile sprints with version control on Git/GitHub.

Front Desk Assistant · Parador de Mérida (Fixed-term contract · Mérida)

Apr 2022 – Aug 2023

- Front desk guest service, first as an intern (Apr – Sep 2022) and then under contract (Oct 2022 – Aug 2023).
- Customer service and sustainable tourism in a demanding environment.

EDUCATION

Higher National Diploma in Cross-Platform Application Development

Cesur · Oct 2023 – Dec 2025

Bachelor's Degree in Tourism

University of Extremadura · Sep 2018 – Jun 2024

CERTIFICATIONS

Programming Logic (Feb 2026) · Intermediate Python (Feb 2026) · SQL and Databases (Jan 2026) · Git and GitHub from Scratch (Jan 2026) · Python from Scratch (Sep 2025)

SKILLS

Backend: Java 17/21, Spring Boot 3, Spring Security + JWT, REST / OpenAPI, JPA / Hibernate, Apache Kafka, NestJS

Data: PostgreSQL, SQL, Flyway, Prisma, Room / SQLite

Quality: JUnit 5, Mockito, Testcontainers, Vitest, Jest

DevOps: Docker, Docker Compose, GitHub Actions, AWS (CloudFormation, EC2, RDS), Maven, Gradle

Client: Kotlin, Jetpack Compose, Retrofit, React, Angular, TypeScript

Architecture: Hexagonal, Tactical DDD, MVVM, SOLID, ADRs

Other: C#, .NET, Unity, Python, Git / GitHub

LANGUAGES

Spanish · Native
